

ABSTRACT OF THE DISCLOSURE

A liquid applicator device for applying a liquid to a target surface includes an applicator head and a reservoir. The reservoir is configured to contain the liquid to be applied to the target surface and is removably coupled to the applicator head. A liquid delivery conduit is associated with the applicator head and is in fluid communication with the reservoir. A plurality of application bristles are coupled to and extend away from the applicator head. The liquid applicator device is configured to distribute the liquid from the reservoir, through the liquid delivery conduit and to the application bristles to allow a user to apply the liquid to the target surface
